Chapter 1: Embracing SAP R/3 and Informix

Navigating the SAP R/3 Landscape

SAP R/3 is a comprehensive enterprise resource planning (ERP) system that offers a wide range of integrated modules covering various business functions such as finance, manufacturing, sales, and human resources. Understanding the SAP R/3 landscape is crucial for successful integration with Informix.

At the core of SAP R/3 is the SAP NetWeaver platform, which provides the foundation for all SAP applications. SAP NetWeaver consists of several components, including the Application Server ABAP (AS ABAP), which is responsible for executing ABAP programs, the SAP HANA database, which provides high-performance data management capabilities, and the SAP NetWeaver

Gateway, which enables communication between SAP systems and external applications.

SAP R/3 also includes a suite of pre-configured business applications, known as SAP modules. These modules cover a wide range of business processes, including financial accounting, materials management, production planning, sales and distribution, and customer relationship management. Each module consists of a set of tables, transactions, and reports that are specifically designed for a particular business function.

To navigate the SAP R/3 landscape effectively, it is important to understand the relationships between the various components and modules. This includes understanding the data flow between different modules, the authorization concept, and the integration points with external systems. Additionally, it is essential to stay up-to-date with the latest SAP R/3 releases and innovations to ensure that the system

remains optimized and aligned with evolving business needs.

By gaining a thorough understanding of the SAP R/3 landscape, organizations can lay the foundation for a successful integration with Informix, enabling them to leverage the strengths of both systems and unlock new opportunities for growth and innovation.
