Chapter 1: The Visionary's Journey

The Early Years: From Seattle to Harvard

In the heart of the Pacific Northwest, in the vibrant city of Seattle, Washington, a young boy named William Henry Gates III was born on October 28, 1955. From an early age, Bill displayed an insatiable curiosity and a fascination for the world of numbers and problem-solving. Encouraged by his parents, William H. Gates Sr. and Mary Maxwell Gates, he immersed himself in the realm of computers and programming, spending countless hours honing his skills.

Bill's passion for computers led him to Lakeside School, a private preparatory school in Seattle, where he encountered a transformative moment that would shape his destiny. In 1968, the school acquired one of the first teletype terminals connected to a mainframe computer. This encounter sparked an intense fascination within Bill, and he spent every spare

moment exploring the possibilities of this new technology.

Bill's exceptional talent and unwavering dedication to programming caught the attention of Lakeside's math teacher, Paul Allen. Recognizing Bill's extraordinary potential, Allen became his mentor and close friend, fostering a partnership that would later revolutionize the world of personal computing. Together, they delved into the intricacies of programming languages, creating their own software programs and experimenting with various applications.

As Bill's expertise grew, he began to envision the potential of computers beyond the confines of academia. He saw the potential for computers to transform industries, empower individuals, and connect people across the globe. Driven by this vision, Bill and Allen embarked on their first entrepreneurial venture, Traf-O-Data, a company that sold traffic data to local governments. Although Traf-O-Data did not

achieve significant commercial success, it provided valuable lessons and experience for the young entrepreneurs.

Bill's academic journey continued at Harvard University, where he enrolled in the fall of 1973. While at Harvard, Bill's passion for computers remained unwavering. He spent countless hours in the university's computer lab, further honing his programming skills and collaborating with fellow students on various projects. However, Bill's entrepreneurial spirit and the allure of the burgeoning computer industry proved too strong. After two years at Harvard, Bill made the bold decision to drop out and pursue his dreams of revolutionizing the world of computing.

Bill's decision to leave Harvard was met with skepticism and concern from some, including his parents and professors. However, Bill was unwavering in his belief that he could make a significant impact on

the world through technology. With the support of his close friend and business partner, Paul Allen, Bill embarked on a journey that would change the course of history and redefine the relationship between humans and computers.
