Chapter 10: Honda GL1500 Valkyrie Projects

Building a trike

If you're looking for a truly unique way to enjoy your Honda GL1500 Valkyrie, consider building a trike. A trike is a three-wheeled motorcycle that offers increased stability and comfort, making it a great choice for long-distance touring or for riders who want a more relaxed riding experience.

Building a trike is a challenging but rewarding project that can be completed in your home garage with the right tools and materials. The first step is to purchase a trike kit, which includes all of the necessary components to convert your Valkyrie into a trike. There are a number of different trike kits available, so be sure to do your research and choose one that is compatible with your Valkyrie and that meets your needs.

Once you have your trike kit, you can begin the conversion process. This typically involves removing the rear wheel and swingarm from your Valkyrie and replacing them with the trike kit's rear axle and wheels. You will also need to install the trike kit's front suspension and steering components.

Once the trike conversion is complete, you will need to make some adjustments to your Valkyrie's controls. This may include relocating the footpegs and handlebars and installing a new brake pedal. You may also need to have your Valkyrie's ECU reprogrammed to work with the trike's new drivetrain.

Building a trike is a complex project, but it is also a lot of fun. And once you're finished, you'll have a truly unique motorcycle that you can enjoy for years to come.

Here are some additional tips for building a trike:

- Make sure you have the right tools and materials before you start.
- Read the instructions for your trike kit carefully and follow them step-by-step.
- Take your time and don't rush the process.
- If you're not sure about something, ask for help from a friend or a professional mechanic.
- Once you're finished, have your trike inspected by a qualified mechanic to make sure it is safe to ride.
